## when power matters

# Protect your business from data loss, hardware damage, and downtime

## The Legendary Reliability of APC with a Small Business Touch

Power interruptions have cost business firms over $45 billion annually. [1] 80% of computer related problems are power related and can be eliminated with power equipment. [2] Unprotected equipment is a disaster waiting to happen. Custom Networks can fit your business with a solution that will help prevent downtime and data loss.

Custom Networks is the no non-sense, go-to source for effective power protection and cooling solutions. As an **APC Elite Partner**, Custom Networks provides the absolute best power protection solution for your organization with down-to earth pricing and exemplary customer service.

With our **award-winning Trade-UPS program** we remove and recycle your old UPS for free and you receive a significant discount on any new APC UPS units and accessories.

An **Energy STEP1 Audit** is the popular first step for our customers to effectively figure out their power usage and requirements in a busy data center. An on-site visit by a certified field engineer provides you with a complete report analyzing your IT efficiency, potential threats or deficiencies, a general rating of your data center, and recommendations for improvement.

Certified MBE by the Greater New England Minority Supplier Development Council (GNEMS-DC), The Commonwealth of Massachusetts' Supplier Diversity Office (MBE/DBE) and the City of Boston (MBE)
